Re: Inserting digital signatures into PDF's using the Bio-Pen; Document Management Systems; Visitor Management Systems; & Employee Electronic Timekeeping.

To whom it may concern,

We thought you might like to see an example of the Bio-Pen in action, so here is an example of how our product can be used to place a digital signature or watermark into a PDF document.

This signature is completely unique and the identity of the signer can be verified electronically. This means documents that need to be signed can be sent by email instead of by post or courier, saving time and money – all while increasing security.

Bio-Pen: 3100197 2009-09-16 03:11:58 PM
Signed by: Wayne

In fact, our technology is so secure that the US military have approved it for use, and we're in talks with a number of companies regarding new ways in which they can utilise the Bio-Pen.

However, we're always interested in finding new applications for this product, and with that in mind we look forward to meeting with you as soon as your diary permits.

Best,
Bio-Pen: 3100187 2009-09-16 03:13:28 PM
